

What are the objectives?

1. Enabling the participants to **produce nutrient rich compost** from the **available waste materials** so as to improve the fertility of soil without any **investment**.
2. To recycle **home waste** and **farm waste** by the process of vermicomposting.
3. To aid in maintaining **bio-compost units** in the backyards.

It is essential to establish a **vermicompost or bio dynamic compost unit** at **farmyard or backyard** so as to get rid of **waste material** (which is an urgent need of this hour) and so as to **reduce environmental pollution** as well.

Learning Outcomes:

- To get habituated with **application of biocompost organic manure** to **enrich soil fertility**.
- To understand the importance of earth worms for improving **the physical, chemical and biological properties of soil**.
- Ensures early availability of various **essential nutrients for plant growth**.
- To encourage the farmers to employ organic farming due to its nutritional and health enhancing properties.
- To minimize use of chemical fertilizers and improve soil fertility.

This course is open to all who lives in Uttarakhand and has an interest in basic farming/ gardening techniques.

NO AGE BAR!
