

KUMAUN UNIVERSITY, NAINITAL

**MODIFIED COMMON MINIMUM SYLLABUS
(AS PER NATIONAL EDUCATION POLICY-2020)**

SUBJECT: COMPUTER SCIENCE

**FOR FOUR YEARS PROGRAMME
IN HIGHER EDUCATION (UG)**

FACULTY OF SCIENCE

**EFFECTIVE FROM ACADEMIC YEAR 2022-2023
(FOR BOTH UNIVERSITY CAMPUS AND COLLEGES)**

		Subject I (Computer Science)		Subject II	Subject III	Subject IV	Vocational	Co-Curricular	Industrial Training / Survey / Research Project	{Minimum Credits} for the Year	{Cumulative Minimum Credits} Required for Award of Certificate/ Diploma/ Degree

1	CS413E	Basics of Remote sensing, GIS & GNSS technology and their applications (SWYAM) https://onlinecourses.swyam2.ac.in/aic22_ge16/preview	4	VII/VIII
3	CS414E	Digital Forensics (SWYAM) https://onlinecourses.swyam2.ac.in/nou22_cs05/preview	4	VII/VIII
4	CS415E	E-Commerce Technologies (SWYAM) https://onlinecourses.swyam2.ac.in/cec22_mg05/preview	4	VII/VIII

Programme outcomes (POs):	
PO 1	Gain a complete exposure to the theories and practices of Computer science.
PO 2	Get transformed into a skilled learner and active programmer, enabling the students to focus on their higher studies.
PO 3	Value computer professionals and programmers.
PO 4	Explore how the concepts and applications of Computer science lead to innovative thinking with a problem-solving attitude.
Programme specific outcomes (PSOs) Certificate in Computer Science	
PSO 1	Bridge the fundamental concepts of computers with the present level of knowledge of the students.
PSO 2	Illustrate the process of problem solving using C++ and apply solutions to real world problems.
PSO 3	Apply applications for a range of problems using object-oriented programming Techniques.
PSO 4	Understand various techniques of data organisation.
Programme specific outcomes (PSOs) Diploma in Computer Science	
PSO 1	Understand Digital Computer and Digital Systems.
PSO 2	Remember and Understand the basics of computer organization and Design.
PSO 3	Learn fundamentals of Database Management System
PSO 4	Create, Maintain, and query MySQL database
Programme specific outcomes (PSOs) Bachelor in Science (with specialization in Computer Science)	
PSO 1	To Gain knowledge of the fundamentals and intermediate-level concepts of Computer Science would have enhanced
PSO 2	To understand the basics and intermediate-level soft skills.
PSO 3	To understand of the traditional and current technologies and practices in the world of Computers and digital platforms.
PSO 4	To view the real-world problems from the spectacles of conceptual knowledge of Computer Science and to develop their solutions in a technical oriented way
Programme specific outcomes (PSOs): Bachelor (Research In Computer Science)	
PSO 1	Learn the concepts of software development life cycle models.
PSO 2	Discuss the key technological components of the Network.
PSO 3	Gain knowledge of advanced and sophisticated data structures, their mechanism, operations, and interconnection with algorithms.
PSO 4	Analyze & implement required module, which may include front-end, back-end, and a small set of middle-end optimizations.

Subject: Computer Science		
Programme/Class: Certificate	Year: 1 st	Semester: I
Course Code: CS101	Course Title: Computer Fundamentals & Problem Solving	
Course outcomes:		
CO 1:	Bridge the fundamental concepts of computers with the present level of knowledge of the students.	
CO 2:	Familiarize operating systems, programming languages, peripheral devices, networking, multimedia and internet	
CO 3:	Understand binary, hexadecimal and octal number systems and their arithmetic.	
CO 4:	Understand the difference between the top-down and bottom-up approach and concepts of object-oriented programming in connection with C++.	
CO 5:	Illustrate the process of data file manipulations using C++ and apply virtual and pure virtual function & complex programming situations.	
Credits: 4		Core Compulsory
Max. Marks: 25+75		Min. Passing Marks:
Total No. of Lectures-Tutorials-Practical (in hours per week): 4-0-0		
Unit	Topic	No. of Lectures
I	Introduction to Computer: Computer System, Advantages and Disadvantages of Computer System, Evolution of computers, Generation of Computers, Classification of Computers, , Block Diagram of a Digital Computer, introduction to Input/ Output Devices.	6
II	Memory: Memory hierarchy, Registers (Types of Registers), Cache Memory. Primary Memory (RAM, how data is stored in a RAM, DRAM and SRAM. ROM (BIOS/Firmware & Types of ROM). Secondary Memory (Hard disk: Structure of a hard disk, how data is stored in a hard disk, concept of tracks, sectors, clusters, cylinders, Various Storage Devices (Magnetic Tape, Floppy Disks, Optical Disks, SD/MMC Memory cards, USB Pen drive).	8
III	Software: Software and its Need, Types of Software: - System software, Application software. Operating System: History of Operating System, Function of Operating System, OS classification (Batch, Multiprogramming, Multitasking, Multithreading, Multiprocessing, Multiuser, Time sharing, real time). Programming languages, Translators: Compiler, Interpreter and Assembler. Network Fundamental: Categories, Data flow, Topology.	6
IV	Fundamentals of C++: Data Types and Sizes, Declaration of variables, Modifiers, Identifiers and keywords, Symbolic constants. Operators, Precedence and order of evaluation. Control statements: if-else, else-if clause, switch. Loops: for, while, do-while, break, continue. Functions: Defining a function, function prototyping and function calls, function arguments, passing by reference, inline functions, and default arguments. Arrays: linear arrays, multidimensional arrays, passing arrays to functions.	8
V	Object Oriented Concepts: Elements of Object-Oriented programming, Objects, Classes, and OOPs features. Classes & Objects: Specifying a Class, Creating Objects, Accessing Class members, defining member function, Outside Member Functions as inline, Accessing Member Functions within the class, Static data member, Access Specifiers, Constructors and Destructors, Exception Handling basics	8
VI	Operator Overloading: Definition, Overloadable Operators, Unary and Binary Operators overloading through Member Functions and Friend Functions,	8

	Function Overloading, Constructor Overloading. Dynamic Memory Allocation: Pointers to Objects, Creating and Deleting Dynamic Objects: New and Delete operators, Array of Objects, Array of Pointers to Objects, Pointers to Object Members, 'this' Pointer.													
VII	Inheritance, Types of Inheritance, Virtual Functions, Pure Virtual Function, Templates, Standard Template Library, Containers: Vectors, Lists, Iterators. File Handling.	8												
VIII	Standard Template Library: STL containers containing vectors, list, queue, map, set, hash_map, hash_set. STL algorithms functions: Sorting Algorithms functions: sort, partial_sort.	8												
Suggested Readings:														
<ul style="list-style-type: none"> • Fundamentals of Computers- P. K. Sinha. • Robert Lafore, Object Oriented Programming in C++, PHI.

Subject: Computer Science																								
Programme/Class: Certificate	Year: 1 st	Semester: I																						
Course Code: CS103	Course Title: Lab: Computer Fundamentals & Problem Solving																							
Course outcomes:	On completion of the course, the student will be able to:																							
CO 1:	Develop programs with reusability.																							
CO 2:	Construct programs for file handling Handle exceptions in programming.																							
CO 3:	Apply applications for a range of problems using object-oriented programming Techniques.																							
Credits: 2		Core Compulsory																						
Max. Marks: 25+75		Min. Passing Marks:																						
Total No. of Lectures-Tutorials-Practical (in hours per week): 0-0-4																								
Unit	Topic	No. of Lectures																						
Lab Experiment List																								
	<ol style="list-style-type: none"> 1. Study of C++ Standard library functions. 2. Write a C++ program to find the sum of individual digits of a positive integer. 3. Write a C++ program to generate the first n terms of the sequence. 4. Write a C++ program to generate all the prime numbers between 1 and n, where n is a value supplied by the user. 5. Write a C++ program to find both the largest and smallest number in a list of integers. 6. Write a C++ program to sort a list of numbers in ascending order. 7. Write a Program to illustrate New and Delete Keywords for dynamic memory allocation 8. Write a program Illustrating Class Declarations, Definition, and Accessing Class Members. 9. Program to illustrate default constructor, parameterized constructor and copy constructors 10. Write a Program to Implement a Class STUDENT having Following Members: <table border="1" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th style="text-align: left;">Member</th> <th style="text-align: left;">Description</th> </tr> </thead> <tbody> <tr> <td colspan="2" style="text-align: center;">Data members</td> </tr> <tr> <td>sname</td> <td>Name of the student</td> </tr> <tr> <td>Marks array</td> <td>Marks of the student</td> </tr> <tr> <td>total</td> <td>Total marks obtained</td> </tr> <tr> <td>tmax</td> <td>Total maximum marks</td> </tr> </tbody> </table> <table border="1" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th colspan="2" style="text-align: center;">Member functions</th> </tr> <tr> <th style="text-align: left;">Member</th> <th style="text-align: left;">Description</th> </tr> </thead> <tbody> <tr> <td>assign()</td> <td>Assign Initial Values</td> </tr> <tr> <td>compute()</td> <td>to Compute Total, Average</td> </tr> <tr> <td>display()</td> <td>to Display the Data.</td> </tr> </tbody> </table>	Member	Description	Data members		sname	Name of the student	Marks array	Marks of the student	total	Total marks obtained	tmax	Total maximum marks	Member functions		Member	Description	assign()	Assign Initial Values	compute()	to Compute Total, Average	display()	to Display the Data.	60
Member	Description																							
Data members																								
sname	Name of the student																							
Marks array	Marks of the student																							
total	Total marks obtained																							
tmax	Total maximum marks																							
Member functions																								
Member	Description																							
assign()	Assign Initial Values																							
compute()	to Compute Total, Average																							
display()	to Display the Data.																							

11. Write a Program to Demonstrate the
i) Operator Overloading. ii) Function Overloading.
12. Write a Program to Demonstrate Friend Function and Friend Class.
13. Write a Program to Access Members of a STUDENT Class Using Pointer to Object Members.
14. Write a Program to Generate Fibonacci Series use Constructor to Initialize the Data Members.
15. Write a C++ program to implement the matrix ADT using a class. The operations supported by this ADT are:
 - a) Reading a matrix b) Addition of matrices. c) Printing a matrix
 - d) Subtraction of matrices. e) Multiplication of matrices
16. Write C++ programs that illustrate how the following forms of inheritance are supported:
 - a) Single inheritance b) Multiple inheritance
 - c) Multi level inheritance d) Hierarchical inheritance
17. Write a C++ program that illustrates the order of execution of constructors and destructors when new class is derived from more than one base class.
18. Write a Program to Invoking Derived Class Member Through Base Class Pointer.
19. Write a Template Based Program to Sort the Given List of Elements.
20. Write a C++ program that uses function templates to find the largest and smallest number in a list of integers and to sort a list of numbers in ascending order.
21. Write a Program Containing a Possible Exception. Use a Try Block to throw it and a Catch Block to handle it properly.
22. Write a Program to Demonstrate the Catching of All Exceptions.

Suggested Continuous Evaluation Methods:

Continuous Internal Evaluation shall be based on allotted Assignment and Class Tests. The marks shall

Internal Assessment	Marks
Record File	5
Viva Voce	5
Practical Assessment	15
Total	25

Course Prerequisites: To study this course, a student must have had the subject Mathematics in class 12th and Computer Fundamentals & Problem Solving in 1st Semester.

Subject: Computer Science		
Programme/Class: Certificate	Year: 1 st	Semester: II
Course Code: CS102	Course Title: Data Structures & Algorithms	
Course outcomes:	On completion of the course, the student will be able to:	
CO 1:	Understand concepts such as Data Organizations, Need of Data Structures, Types of Data Structure, Algorithm Complexity, and Time-Space trade-off.	
CO 2:	Understand and apply data structures such as Stacks, Queues, Arrays, and Linked List.	
CO 3:	Understand the concept of different searching and sorting algorithms.	
Credits: 4		Core Compulsory
Max. Marks: 25+75		Min. Passing Marks:
Total No. of Lectures-Tutorials-Practical (in hours per week): 4-0-0		
Unit	Topic	No. of Lectures
I	Introduction to Data Structures & Algorithms: Basic Terminology, Data type, Data object, Need of Data Structure, Types of Data Structure, Elementary Data Organization, Data Structure operations, Algorithm Complexity and Time-Space trade-off.	10
II	Arrays & Linked Lists: Arrays, Single and Multidimensional Arrays, address calculation, application of arrays, linked list: Representation and implementation of Singly Linked Lists, Header List, Traversing and Searching of Linked List, Overflow and Underflow, Insertion and deletion to and from Linked Lists, doubly linked list.	13
III	Stacks & Queues: Stacks: Array and linked representation and implementation of stack, Operations on Stacks: Push & Pop, Applications of stack: Conversion of Infix to Prefix and Postfix Expressions, Evaluation of postfix expression using stack. Recursion: Introduction, recursion in C, example of recursion, recursive functions. Queues: Array and linked representation and implementation of queues, Operations on Queue: Create, Insert, Delete, Full and Empty. Circular queue, Deques, and Priority Queues.	14
IV	Trees & Graphs: Trees: Basic terminology, Binary Trees, Binary tree representation, algebraic expressions, Complete Binary Tree., Traversing Binary trees, Binary Search Tree, searching BST, insertion and deletion in BST. Graph: Basic terminology, Traversal: BFS, DFS. Spanning Tree: Prims, Kruskal Algorithm, Dijkstra's Algorithm.	13
V	Searching & Sorting: Searching- Sequential search, binary search. Sorting algorithms with efficiency- Bubble sort, selection sort, Insertion sort, Merge sort, Quick Sort, Counting sort.	10

Programme/Class: Diploma	Year: 2 nd	Semester: III
Course Code: CS201	Course Title: Digital Electronics & Computer System Architecture	
Course outcomes:	On completion of the course, the student will be able to:	
CO 1:	Understand Digital Computer and Digital Systems.	
CO 2:	Understand the logic and applications of Boolean algebra and logic gates.	
CO 3:	Remember and understand the basics of computer organization and Design.	
Credits: 6		Core Compulsory
Max. Marks: 25+75		Min. Passing Marks:
Total No. of Lectures-Tutorials-Practical (in hours per week): 6-0-0		
Unit	Topic	No. of Lectures
I	Fundamental concepts, Boolean algebra and logic gates: Digital Computer and Digital Systems, Binary Numbers, Number Base Conversion, Complements, Binary Codes. Basic Theorem and Properties of Boolean Algebra, Boolean functions, Canonical and standard forms. Digital logic gates, Simplification of Boolean functions: two and three variable Maps, four variable maps.	15
II	Combinational & Sequential Logic Design: Adders, Subtractors, Decoder, Encoder, Multiplexers, De-Multiplexers. Flip-flops: Basic flip-flop, RS, JK, D, T. Triggering of flip-flops, Analysis of clocked sequential circuits, state reduction and assignment, flip-flop excitation tables.	15
III	Registers, Counters and the Memory: Registers, shift registers, Counters, Asynchronous and synchronous counters, Memory Hierarchy, Main memory (RAM/ROM chips), Concept of Cache memory and Virtual Memory.	15
IV	Basic Computer Organization and Design: Register Transfer Language, Arithmetic and Logical micro-operations, Shift micro-operation. Computer registers, bus system, instruction set, timing and control, instruction cycle, memory reference instructions, input-output and interrupt. Design of basic computer.	15
V	Central Processing Unit: Micro programmed control, Control memory, address sequencing, General Register organization, stack organization, Instruction formats, addressing modes, Data transfer and manipulation, Program Control, RISC, and CISC.	15
VI	Input-Output Organization & Pipelining: Peripheral devices, I/O interface, Asynchronous data transfer, Strobe Control, Handshaking Modes of Transfer, Priority Interrupt, Direct Memory Access, Input-Output Processor, and Serial Communication. Parallel processing, Amdahl's law, Pipelining, Flynn's classification, space-time diagram, speedup ratio, Arithmetic pipeline, Instruction pipeline.	15

Course Prerequisites: Certificate with Computer Science as a Major Subject

--	--	--

Subject: Computer Science														
Programme/Class: Diploma	Year: 2 nd	Semester: IV												
Course Code: CS202	Course Title: Database Management System with Python													
Course outcomes:	On completion of this programme, the student will be able to													
CO 1:	Remember fundamentals of Database Management System													
CO 2:	Understand RDBMS Concepts like Normalization and Functional Dependencies													
CO 3:	Apply Normalization Concepts to create Redundancy Free Databases.													
CO 4:	Understand Programming with Python													
CO 5:	Create MySQL database and Evaluate MySQL queries through Python													
Credits: 4		Core Compulsory												
Max. Marks: 25+75		Min. Passing Marks:												
Total No. of Lectures-Tutorials-Practical (in hours per week): 4-0-0														
Unit	Topic	No. of Lectures												
I	Elements of Database System, Database Users, Data Independence, Database Models, CODD's Rules, Entity Relationship Model, Specialization and Generalization, Relational Algebra, Relational Calculus, Keys, Functional Dependencies, Normalization Concepts,	10												
II	Transaction systems, schedule and recoverability, Testing of serializability, Serializability of schedules, conflicts. Concurrency control techniques: Locking techniques for concurrency control, Time stamping protocols validation techniques, multiple granularity, multiversion schemes	10												
III	Introduction to Python, Data Types, Python Interpreter, Strings	5												
IV	Program Organization and Functions, Decorators, Lambda Functions, Variable Length Arguments, Keywords Arguments, Generators	10												
V	Class and Objects, OOPs Concepts, Operator Overloading, Dunder Methods, Iterators, Exception Handling	10												
VI	SQL Fundamentals, MySQL Queries, MySQL using Python, Introduction to MySQL Connector Library, Executing MySQL Queries through Python	15												
Suggested Readings:														
<ul style="list-style-type: none"> • Python the Complete Reference, Martin C. Brown • Silberschatz & Korth,, Database system Concepts, TMH • C.J.Date, An Introduction to Database System, Narosa Pub 														
Suggested equivalent online courses/content:														
<ul style="list-style-type: none"> • https://www.w3schools.com/python/python_mysql_getstarted.asp • https://nptel.ac.in/noc/courses/noc22/SEM1/noc22-cs57/ • http://docs.python.org/3/tutorial/index.html 														
This course can be opted as an elective by the students of following subjects:														
Students of Mathematics/Statistics														
Suggested Continuous Evaluation Methods:														
Continuous Internal Evaluation shall be based on allotted Assignment and Class Tests. The marks shall

Course Prerequisites: Diploma with Computer Science as a Major Subject														

Subject: Computer Science												
Programme/Class: Diploma	Year: 2 nd	Semester: IV										
Course Code: CS204	Course Title: Lab: Database Management System in Python											
Course outcomes:	On completion of the course, the student will be able to:											
CO 1:	Solve Computer Problems using Python.											
CO 2:	Create and Analyze MySQL Databases with/without python.											
Credits: 2		Core Compulsory										
Max. Marks: 25+75		Min. Passing Marks:										
Total No. of Lectures-Tutorials-Practical (in hours per week): 0-0-4												
Unit	Topic	No. of Lectures										
Lab Experiment List												
	<ol style="list-style-type: none"> 1. Creation of databases and execution of SQL queries. 2. Creation of Tables using MySQL: Data types, Creating Tables (along with Primary and Foreign keys), 3. Altering Tables and Dropping Tables. 4. Practicing DML commands- Insert, Select, Update, Delete. 5. Practicing Queries using ANY, ALL, IN, EXISTS, NOT, EXISTS, UNION, INTERSECT, and CONSTRAINTS, etc. 6. Practice Queries using COUNT, SUM, AVG, MAX, MIN, GROUP BY, HAVING, VIEWS Creation and Dropping. 7. Write a program in Python to find if a number is prime or not. 8. Write a program in Python to check if the given number is an Armstrong Number or not. 9. Write a program in python to print fibonacci sequence up to n terms using generators. 10. Write a program in Python to find all the duplicate characters in a String. 11. Write a program in Python for Tower of Hanoi. 12. Write a program in Python to implement a Linked List. Make this Linked list Iterable. 13. Write a program in Python for implementing a Adjacent List Implementation of a Graph. 14. Write a Program in Python to implement your own Complex Number Data Type and overload operators for basic Complex Numbers Arithmetic Operations. 15. Write a program in python to create a link to a local database. 16. Implement Queries given in 2,3,4,5,6 using Python. 	60										
Suggested Continuous Evaluation Methods:												
Continuous Internal Evaluation shall be based on allotted Assignment and Class Tests. The marks shall

Subject: Computer Science		
Programme/Class: Bachelor in Science		Year: 3 rd
Course Code: CS301		Course Title: Computer Graphics in JAVA
Course outcomes:		On completion of this programme, the student will be able to
CO 1:	Remember the fundamentals of generating graphics using a computer	
CO 2:	Understand various 2D shapes drawing Algorithms.	
CO 3:	Analyze various Computer Graphics Transformation Operations.	
CO 4:	Remember the fundamentals of JAVA programming.	
CO 5:	Understand the workings of JVM.	
CO 6:	Create programs to demonstrate the various Computer Graphics Algorithms.	
Credits: 4		Core Compulsory
Max. Marks: 25+75		Min. Passing Marks:
Total No. of Lectures-Tutorials-Practical (in hours per week): 4-0-0		
Unit	Topic	No. of Lectures
I	Basic elements and Applications of Computer Graphics. Graphics Hardware, Video Display Devices, Architecture of Raster and Random scan display devices, Input devices, Hard-copy devices, Graphics software. Line Drawing Algorithms: DDA Algorithm, Bresenham's Line algorithm, Circle Generating Algorithms: Midpoint Circle Algorithm. Filled-Area Primitives: Scan-line polygon fill algorithm, Inside-Outside Tests, boundary Fill Algorithm, Flood- Fill algorithm.	12
II	Basic Transformations- Translation, Rotation, Scaling. Matrix representations and Homogeneous Coordinates, Composite Transformations. Other Transformations: Reflection, Shearing. The Viewing Pipeline, Clipping operations: Point clipping, Line Clipping: Cohen Sutherland line clipping, Liang-Barsky line clipping, Nicholl-lee-Nicholl line clipping, Polygon Clipping: Sutherland-Hodgeman Polygon Clipping, Weiler-Atherton Polygon Clipping, Curve Clipping, Text Clipping, Exterior Clipping.	15
III	3-D display methods: Parallel projection, Perspective projection, Depth cueing, Visible line and surface identification, Surface rendering. Basic Transformations- Translation, Rotation, Scaling.	12
IV	Introduction to JAVA, JVM, JRE, Garbage Collectors, Structure of a JAVA Program, Data Types, Variables, Operators, Keywords, Naming Conventions Loops, Arrays. Memory Allocation, OOPs Concepts using JAVA, Methods, final keyword Abstract classes and interfaces, Packages, JAVA Built-In Packages, Exception Handling.	9
V	Introduction to AWT and Swing, JFrame and JPanel, Listener and Adapter Classes, Swing Components, Event and Delegation Model, Graphics API Methods, drawing shapes using Graphics API. Implementing Graphics Algorithms for Line Drawing (DDA, Bresenham's), Circle Drawing (Mid-Point), ScanLine Polygon Fill in JAVA, 3D Graphics in JAVA.	12
Suggested Readings:		
<ul style="list-style-type: none"> ● Computer Graphics via Java by Ian Ferguson ● D.Hearn, Baker: Computer Graphics, Prentice Hall of India 2008 		
Suggested equivalent online content/courses:

Programme/Class: Bachelor in Science	Year: 3 rd	Semester: VI
Course Code: CS302	Course Title: Operating System & System Administration	
Course outcomes:	On completion of the course, the student will be able to:	
CO 1:	Understand fundamental operating system abstractions such as processes, threads, files, semaphores, IPC abstractions, shared memory regions, etc.,	
CO 2:	Analyze important algorithms eg. Process scheduling and memory management algorithms	
CO 3:	Categorize the operating system's resource management techniques, dead lock management techniques, memory management techniques	
CO 4:	Demonstrate the ability to perform OS tasks in LINUX	
Credits: 4		Core Compulsory
Max. Marks: 25+75		Min. Passing Marks:
Total No. of Lectures-Tutorials-Practical (in hours per week): 4-0-0		
Unit	Topic	No. of Lectures
I	Introduction: Basics of Operating Systems: Definition – Generations of Operating systems – Types of Operating Systems, OS Service, System Calls. Process Management: Processes: Definition, Process Relationship, Process states, Process State transitions, Process Control Block, Context switching – Threads – Concept of multithreads. Process Scheduling: Definition, Scheduling objectives, Types of Schedulers, Scheduling criteria: CPU utilization, Throughput, Turnaround Time, Waiting Time, Response Time (Definition only), Scheduling algorithms: Pre-emptive and Non, pre-emptive, FCFS – SJF – RR	12
II	Inter-process Communication: Race Conditions, Critical Section, Mutual Exclusion, Peterson's Solution, The Producer Consumer Problem, Semaphores, Classical IPC Problems: Reader's & Writer Problem, Dining Philosopher Problem etc. Deadlocks: Definition, Deadlock characteristics, Deadlock Prevention, Deadlock Avoidance: banker's algorithm, Deadlock detection and Recovery.	10
III	Memory Management: Basic Memory Management: Definition, Logical and Physical address map, Memory allocation: Contiguous Memory allocation, Fixed and variable partition, Internal and External fragmentation and Compaction, Paging: Principle of operation, Page allocation, Hardware support for paging, Protection and sharing, Disadvantages of paging. Virtual Memory: Basics of Virtual Memory, Hardware and control structures, Locality of reference, Page fault, Working Set, Dirty page/Dirty bit, Demand paging (Concepts only), Page Replacement policies: Optimal (OPT), First in First Out (FIFO, Least Recently used (LRU).	10
IV	I/O Management & Disk Scheduling: I/O Devices and the Organization of I/O Disk I/O, Disk Scheduling Algorithm, Operating System Design Issues. File System: File Concept, File Organization and Access Mechanism, File Directories, File Sharing, Implementation Issues.	10
V	Unix Administration: Overview of System Administration – System Administrator Responsibilities, A Brief History of Unix. User Administration – what is a user, the /etc/passwd file, groups, the /etc/group file, passwords adding, deleting and modifying user attributes, /etc/profile file, the login process, /etc/motd file, the wall command. File System Basic - The Hierarchy, files, directories, device files, character and block devices, the /dev directory, links, symbolick links, a file system tour, df command, du command, find command. Disk Management – Making a file system, mkfs command, mount command fstab file, fsck command, lost+found directory, prtvtoc command.	8

	Unix Process – overview, process space, process table, fork/exec mechanism, ps command, background process, kill command, scheduling jobs, the cron daemon, at command, crontab command, cron files. Configuring TCP/IP - /etc/hosts file, ifconfig command. /etc/services/ file, inetd daemon, /etc/inetd.conf, TCP/IP troubleshooting, the ping and netstat commands. Network Utilities- Network Services, telnet, ftp, rcp, rlogin, rsh.													
VI	Shell introduction and Shell Scripting: What is shell and various type of shell, Various editors present in linux, Different modes of operation in vi editor. What is shell script, Writing and executing the shell script, Shell variable (user defined and system variables) System calls, Using system calls, Pipes and Filters, Decision making in Shell Scripts (If else, switch), Loops in shell, Functions, Utility programs (cut, paste, join, tr , uniq utilities), Pattern matching utility (grep)	10

Subject: Computer Science		
Programme/Class: Bachelor (Research In Computer Science)		Year: 4 th
Course Code: CS403		Course Title: Theoretical foundation of Computing
Course outcomes: On completion of the course, the student will be able to:		
CO 1:	Introduce the basic preliminaries and theoretical foundations of computer science.	
CO 2:	Understanding of the notion of a regular set and its representation by DFA's, NFA's, and regular expressions.	
CO 3:	Design of the notion of a context-free language and its representation by context-free grammars and push-down automata.	
CO 4:	Construction of the notion of a universal model of computation and its representation by a Turing machine.	
CO 5:	Basic understanding of the notion of an undecidable problem.	
Credits: 4		Core Compulsory
Max. Marks: 25+75		Min. Passing Marks:
Total No. of Lectures-Tutorials-Practical (in hours per week): 4-0-0		
Unit	Topic	No. of Lectures
I	FINITE AUTOMATA (FA): Introduction, Deterministic Finite Automata (DFA) - Formal definition, simpler notations (state transition diagram, transition table), language of a DFA. Nondeterministic Finite Automata (NFA)- Definition of NFA, language of an NFA, Equivalence of Deterministic and Nondeterministic Finite Automata, Applications of Finite Automata, Finite Automata with Epsilon Transitions, Eliminating Epsilon transitions, Minimization of Deterministic Finite Automata, Finite automata with output (Moore and Mealy machines) and Inter conversion.	12
II	REGULAR EXPRESSIONS (RE): Introduction, Identities of Regular Expressions, Finite Automata and Regular Expressions- Converting from DFA's to Regular Expressions, Converting Regular Expressions to Automata, applications of Regular Expressions. REGULAR GRAMMARS: Definition, regular grammars and FA, FA for regular grammar, Regular grammar for FA. Proving languages to be non-regular -Pumping lemma, applications, Closure properties of regular languages.	12
III	CONTEXT FREE GRAMMER (CFG): Derivation Trees, Sentential Forms, Rightmost and Leftmost derivations of Strings. Ambiguity in CFG's, Minimization of CFG's, CNF, GNF, Pumping Lemma for CFL's, Enumeration of Properties of CFL (Proof's omitted).	12
IV	PUSHDOWN AUTOMATA: Definition, Model, Acceptance of CFL, Acceptance by Final State and Acceptance by Empty stack and its Equivalence, Equivalence of CFG and PDA. TURING MACHINES (TM): Formal definition and behaviour, Languages of a TM, TM as accepters, and TM as a computer of integer functions, Types of TMs.	12
V	RECURSIVE AND RECURSIVELY ENUMERABLE LANGUAGES (REL): Properties of recursive and recursively enumerable languages, Universal Turing machine, The Halting problem, Undecidable problems about TMs. Context sensitive language and linear bounded automata (LBA), Chomsky hierarchy, Decidability, Post's correspondence problem (PCP), undecidability of PCP.	12
Suggested Readings:		
<ul style="list-style-type: none"> • John E. Hopcroft, Rajeev Motwani, Jeffrey D. Ullman (2007), Introduction to Automata Theory Languages and Computation, 3rd edition, Pearson Education, India. • Dexter C. Kozen, Automata and Computability, Springer Publishers, 2007.

This course can be opted as an elective by the students of following subjects: NONE

Suggested Continuous Evaluation Methods:

Continuous Internal Evaluation shall be based on allotted Assignment and Class Tests. The marks shall

Internal Assessment	Marks
Class Interaction	5
Quiz/ Assignments	5
Seminar/Presentation	5
Unit Test/Class Test	10
Total	25

Course Prerequisites: B.Sc. with Computer Science as a major subject

Subject: Computer Science														
Programme/Class: Bachelor (Research In Computer Science)		Year: 4 th												
Course Code: CS405		Course Title: Artificial Intelligence												
Course outcomes: On completion of the course, the student will be able to:														
CO 1:	Understand the basics of Artificial Intelligence.													
CO 2:	Gain knowledge of the learning process and its models.													
CO 3:	Understand the AI applications in the design of expert systems.													
Credits: 4		Core Compulsory												
Max. Marks: 25+75		Min. Passing Marks:												
Total No. of Lectures-Tutorials-Practical (in hours per week): 4-0-0														
Unit	Topic	No. of Lectures												
I	Early work in AI, AI and related fields, Problem Solving Introduction, State space search, Production system, Breadth First Search, Depth First Search, Problem Characteristics, Heuristic Search-Generate and Test, Simple Hill climbing, Path Finding Algorithm	12												
II	Knowledge representation, Definition and Importance of Knowledge, Knowledge based system, Representation of knowledge, Introduction of predicate logic, Well-formed formula, Inference rule and numerical, The Resolution principle, Representation using rule.	12												
III	Natural Language Processing: Introduction, Problems in Natural Language Understanding, Overview of Linguistics, Grammars and Languages, Natural Language Generation, Natural Language Systems, Top-Down Parser, Bag of Words Model.	12												
IV	Evolutionary Computation, Genetic Algorithms, Terminologies and Operators of GA, Ant Colony Optimization, Particle Swarm Optimization, GA Tool using MATLAB.	12												
V	Introduction, Need and Justification of Expert System, Knowledge Acquisition, Knowledge System building tools, Basic steps of Expert System Development, Fuzzy Sets, Operations on Fuzzy Sets, Fuzzy Relations, Membership Functions, Fuzzy Rules and Fuzzy Reasoning, Fuzzy Inference Systems, Fuzzy Decision Making	12												
Suggested Readings:														
<ul style="list-style-type: none"> • Russel and Norvig, "AI: A modern approach", Pearson Education • Elian Rich and Kelvin Knight, "AI", TMH • Dan W. Patterson, "Introduction to Artificial Intelligence and Expert Systems" • K M FU," Neural Network in Computer Intelligence", Mc Graw Hill 														
Suggested equivalent online courses:

--	--	--

Subject: Computer Science		
Programme/Class: Bachelor (Research In Computer Science)		Year: 4 th
Course Code: CS407		Course Title: Design and Analysis of Algorithms
Course outcomes: On completion of the course, the student will be able to:		
CO 1:	Learn the basic and advanced design and analysis procedures.	
CO 2:	Gain knowledge of advanced and sophisticated data structures, their mechanism, operations, and interconnection with algorithms.	
Credits: 4		Core Compulsory
Max. Marks: 25+75		Min. Passing Marks:
Total No. of Lectures-Tutorials-Practical (in hours per week): 4-0-0		
Unit	Topic	No. of Lectures
I	Algorithms, Analysis of Algorithm, Design of Algorithms, Time and space complexities, Asymptotic notations, Growth+ of Functions, Recurrences. Sorting in Polynomial Time: Insertion Sort, Merge Sort, Heap sort and Quick Sort. Sorting in Linear Time: Counting Sort, Radix Sort, Bucket Sort	12
II	Elementary Data Structure: Stacks, Queues, Linked List, Binary Search Tree, Hash Table, Red Black Trees, AVL Tree, Splay Tree, Augmenting Data Structure Advanced Data Structure: Binomial Heap, B-tree, Fibonacci Heap, and Data Structure for Disjoint sets.	12
III	Advanced Design and Analysis Techniques: Dynamic Programming, Greedy Algorithm, Backtracking, Branch- and- Bound. Huffman Coding.	12
IV	Graph Algorithms: Elementary Graph Algorithm, Breadth First Search, Depth First Search, Minimum Spanning Tree, Kruskal's Algorithm, Prim's Algorithm, Single Source Shortest Path, All Pair Shortest Path, Maximum Flow and Travelling Salesman Problem.	12
V	Randomized Algorithm: String Matching, NP-Hard and NP- Completeness, Approximation Algorithms.	12
Suggested Readings:		
<ul style="list-style-type: none"> • T.H. Cormen, C.E. Leiserson, R.L. Rivest, C. Stein. Introduction to Algorithms, MIT Press, 3rd edition, 2009. ISBN 0-262-03384-4 • Horowitz Sahni, "Fundamentals of Computer Algorithm", Galgotia. • M.T. Goodrich etal, "Algorithms Design", John Wiley and Sons.

Subject: Computer Science		
Programme/Class: Bachelor (Research In Computer Science)		Year: 4 th
Course Code: CS402		Course Title: Compiler Design
Course outcomes: On completion of the course, the student will be able to:		
CO 1:	Understand fundamentals of compiler and identify the relationships among different phases of the compiler.	
CO 2:	Understand the application of finite state machines, recursive descent, production rules, parsing, and language semantics.	
CO 3:	Analyze & implement required module, which may include front-end, back-end, and a small set of middle-end optimizations.	
CO 4:	Use modern tools and technologies for designing new compiler.	
Credits: 4		Core Compulsory
Max. Marks: 25+75		Min. Passing Marks:
Total No. of Lectures-Tutorials-Practical (in hours per week): 4-0-0		
Unit	Topic	No. of Lectures
I	Introduction to compilers – Analysis of the source program, Phases of a compiler, grouping of phases, compiler writing tools – bootstrapping Lexical Analysis: The role of Lexical Analyzer, Input Buffering, Specification of Tokens using Regular Expressions, Review of Finite Automata, Recognition of Tokens.	12
II	Syntax Analysis: Review of Context-Free Grammars – Derivation trees and Parse Trees, Ambiguity. Top-Down Parsing: Recursive Descent parsing, Predictive parsing, LL(1) Grammars.	12
III	Bottom-Up Parsing: Shift Reduce parsing – Operator precedence parsing (Concepts only) LR parsing – Constructing SLR parsing tables, Constructing, Canonical LR parsing tables and Constructing LALR parsing tables.	12
IV	Syntax directed translation: Syntax directed definitions, Bottom-up evaluation of Sattributed definitions, L- attributed definitions, Top-down translation, Bottom-up evaluation of inherited attributes. Type Checking : Type systems, Specification of a simple type checker	12
V	Run-Time Environments: Source Language issues, Storage organization, Storage allocation strategies. Intermediate Code Generation (ICG): Intermediate languages – Graphical representations, ThreeAddress code, Quadruples, Triples. Assignment statements, Boolean expressions.	12
VI	Code Optimization: Principal sources of optimization, Optimization of Basic blocks Code generation: Issues in the design of a code generator. The target machine, A simple code generator.	12
Suggested Readings:		
<ul style="list-style-type: none"> • Compilers Principles, Techniques and Tools, Second Edition, Alfred V. Aho, Monica S. Lam, Ravi Sethi, Jeffrey D. Ullman., Pearson. • Compiler Design, K. Muneeswaran., Oxford University Press, 2012

Subject: Computer Science														
Programme/Class: Bachelor (Research In Computer Science)		Year: 4 th												
Semester: VIII														
Course Code: CS404		Course Title: Research trends in Computer Science												
Course outcomes: On completion of the course, the student will be able to:														
CO 1:	Understand the fundamentals of latest trends in Computer Science Research.													
CO 2:	Learn about the workings of latest technologies like web3 & IoT.													
CO 3:	Analyze problems related to soft computing.													
CO 4:	Solve statistical data problems using R.													
Credits: 4		Core Compulsory												
Max. Marks: 25+75		Min. Passing Marks:												
Total No. of Lectures-Tutorials-Practical (in hours per week): 4-0-0														
Unit	Topic	No. of Lectures												
I	Introduction to Research Oriented AI: Introduction to AI, Modern Research Trends in AI, Introduction to, Deep Learning, NLP, Computer Vision, Big Data Analysis, Applications of AI, AI for Healthcare, AI for Education, AI for Commerce.	12												
II	Introduction to Blockchain and Web3: Introduction to Blockchain, Blockchain design principle, Blockchain ecosystem, Implementation challenges, Applications of Blockchain Systems, Cryptocurrency, Decentralization, Introduction to Web3.	12												
III	Introduction to Soft Computing: Introduction to fuzzy logic, Fuzzy Sets and Membership, Chance versus Ambiguity. Classical Sets - Operations on Classical Sets, Properties of Classical (Crisp) Sets, Mapping of Classical Sets to Functions Fuzzy Sets - Fuzzy Set operations, Properties of Fuzzy Sets., Introduction to Genetic Algorithm and its application.	12												
IV	Introduction to IoT: What is IoT, Genesis of IoT, IoT and Digitization, IoT Architecture, IoT Impact, Convergence of IT IoT, IoT Challenges, IoT Network Architecture and Design, The Core IoT Functional Stack, IoT Data Management and Compute Stack.	12												
V	Introduction to R: Introduction to R interpreter, R data structures like vectors, matrices, arrays, list and data frames, Control Structures, vectorized if and multiple selection, functions, Statistical analysis of data for summarizing and understanding data, Visualizing data.	12

Course Prerequisites: B.Sc. with Computer Science as a major subject														

Subject: Computer Science														
Programme/Class: Bachelor (Research In Computer Science)		Year: 4 th	Semester: VIII											
Course Code: CS408	Course Title: Software Engineering													
Course outcomes:	After successful completion of course the student should be able to :													
CO 1:	Learn the concepts of software development life cycle models.													
CO 2:	Develop correct and robust software products by gathering requirements.													
CO 3:	Analyze various metrics for estimation of software.													
CO 4:	Manage and maintain Software Project to ensure good quality software with high reliability.													
CO 5:	Gain knowledge in different Key Process Areas like planning and estimation of software projects, the implementation issues, validation and verification procedures.													
Credits: 4		Core Compulsory												
Max. Marks: 25+75		Min. Passing Marks:												
Total No. of Lectures-Tutorials-Practical (in hours per week): 4-0-0														
Unit	Topic	No. of Lectures												
I	Introduction: Software Engineering vs. Traditional Programming, System Development Life Cycle (Software Production Process, Conception, Initiation, Analysis Design, Construction, Testing, Implementation). Waterfall Model, Evolutionary Model. Factors affecting Software Development and Maintenance.	12												
II	Software Project Management: Defining the Problem, developing a Solution Strategy, Planning the Development Process, Measurement of Software Productivity and Quality.	12												
III	Software Engineering Principles & Tools: Tools of Design (Data Flow Diagrams, Data Dictionary, Decision Tree, Decision Tables), Modularization (Coupling).	12												
IV	Testing: Testing fundamentals, Unit testing, Blackbox testing, Whitebox testing, Basic Path testing, Control Structure testing, Integration testing.	12												
V	Software maintenance: Introduction to Software Maintenance, Enhancing Maintainability During Development (analysis Activities, Standards and Guidelines, Design activities, Implementation Activities, Supporting Documents) Managerial Aspects of Software Maintenance (Change Control Board, Change Request summaries, Quality Assurance Activities, Organizing Maintenance Programs).	12												
Suggested Readings:
